Review date: March 2019 and March 2020

Patient information

Verbal/written advice to be given to patient	Discuss side effects and administration with the patient and provide a manufacturers patient information leaflet.
	 Advise patient that the infection can spread therefore need to wash hands after touching eyes (personal hygiene) and not to share towels etc.
	Advise patient not to touch the eye or lashes with the eye ointment nozzle as this may contaminate the medicine.
	 Advise patient to discard eye ointment after completing the treatment.
	Contact lens wearers should be advised to remove contact lenses for the duration of treatment and for 24 hours after treatment has been completed
	 If patients are using other (prescribed) eye drops/ointments, they should be advised to apply these first, wait 5 minutes, then apply the Chloramphenicol eye ointment.
	 Consult your GP if symptoms do not improve after 3 days or sooner if symptoms worsen. This instruction must be included on the label.
	 Advise the patient not to drive or operate machinery unless vision is clear. Patient information is available on the NHS website at: https://www.nhs.uk/
Follow-up advice to be given to patient or carer	Contact GP if no improvement of symptoms after 3 days or sooner if symptoms worsen

Valid from: April 2017

Review date: March 2019 and March 2020
